

Henri Schulte: Forget about the model: How to build AI applications with impact

More and more applications rely on large language models to perform some of their functions, but it's rarely the LLM alone that creates value - it's always been about data (and some prompt engineering). Find out how modern AI-powered applications, like Microsoft's AI Copilots, operate under the hood and learn how you can build your own. You don't have to be a giant tech company to build with AI!
